

Don't delay, get vaccinated against HPV

NHS advice:

Children aged 12 – 13 (school year 8) should get the HPV vaccine.

The FREE HPV vaccine protects against:

- Strains of HPV that cause most types of cancer
- Up to 90% of cervical cancer cases
- Up to 99% of genital warts cases.

Speak to your school or GP practice if they are eligible for the HPV vaccine and have not been vaccinated yet.
