

Two puffs and you're away!

NHS

Whether your child dreams of being a knight, a princess, or a dragon - the nasal spray flu vaccine helps protect them this winter.

Children aged 2-3 can get their free vaccine at their GP surgery, or some pharmacies.

Protect your little ones with two puffs this winter.

The nasal spray vaccine contains porcine gelatine; an alternative injectable flu vaccine is available. If you have any questions, speak to your GP surgery or local pharmacy.

You can also scan the QR code to book online.
