

Return your used inhalers to a pharmacy to help reduce your carbon footprint

The propellants used in **some inhalers** are powerful greenhouse gases that contribute to **climate change**. Even after an inhaler is finished it still contains these environmentally damaging gases.

Make sure your patients return all used inhalers to your local pharmacy for safe disposal

Returned inhalers will be incinerated which will destroy the greenhouse gases and prevent inhaler plastics going to landfill.

Don't throw used inhalers into your general waste or recycling bins! Landfill disposal of inhalers is harmful to the environment due to left over gases being released into the atmosphere. Plastics from inhalers cannot be recycled using domestic recycling schemes.

Make each puff count!

Ensure patients order inhalers only when required to reduce waste.

Please speak to your patient if they have concerns about the environmental impact of their inhaler - **its important they don't stop using their inhaler.**
